

`ReducibleQ@k` gives `True` if the knot k , which is given in modified DT form, can be reduced using the first Reidemeister move, a 2,1-pass move, or a 3,2-pass move and `False` otherwise.

```
ReducibleQ@k_MDT := ReducibleQ@k =  
  Or @@ Array[Mod[# - Abs@k[[#]], Length@k] ≤ 1 &,   
    Length@k] || PassReducible@k;
```
